

FOR COLLEGE STUDENTS:

PLAN OF ACTION

When we talk about the growth of the country, we take various factors into consideration and education is one of them. While most of the urban schools are getting the best of infrastructure, facilities and teachers, schools in rural areas are still struggling for quality education. Lack of teaching staff and motivation among students are two of the major reasons behind poor education quality in rural schools. 85% of the government schools are in villages, and do not get the benefit of quality education.

To tackle this problem, we have made a website for college students to apply for internships for teaching underserved students. Along with it, an interactive game that is meant to spread awareness about education among the general public. The game is engaging, we promise.

We are killing two birds with one stone – tackling the lack of internships and education. By this, 200 or more, rural and slum children in our target area are going to enjoy the benefits of this project.

SELECTED THEME:

EDUCATION

Providing access to quality education and expanding learning opportunities for the students of the underserved communities in both rural and urban areas continues to be a major challenge.

TEAM NAME:

ATOMIC

We invest in knowledge...

We will provide internships for teaching underserved children.

REASONS FOR APPLYING:

- Internship with certificates
- Gain teaching experience
- Helping the needy makes for a huge source of self-motivation and self-happiness
 - No need to go far away. Teach at the nearest sub locality

FOR UNDERSERVED STUDENTS:

Underserved students will be taught by the hired interns. The money gained through Google Ads and through sponsors will be invested to rent computer centers to bridge the gap between these children and technology.
